**FCC Notice:**

•This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

•This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

**Cautions:**

Changes or modifications made in the radio phone, not expressly approved by Bestpower Direct Export Co. Ltd, will void the user's authority to operate the equipment.

Only use approved batteries, antennas and chargers. The use of any unauthorized accessories may be dangerous and void the phone warranty if said accessories cause damage or a defect to the phone.

SAR values:

The exposure guidelines for mobile devices employ a unit of measurement known as the Specific Absorption Rate or SAR. The Tests for SAR are conducted using standard operation positions with the device transmitting at certified power level in all tested frequency bands. Your mobile device is also designed to meet the requirements for radio waves established by the Federal Communications Commission (USA). These requirements set a SAR limit of 1.6W/kg averaged over one gram of tissue. The highest SAR value reported under this standard during product certification for use at GSM 848 the ear is **0.239** W/kg and when properly body-worn is **1.110** W/kg, for use at PCS 1900 the ear is **0.302** W/kg and when properly body-worn is **1.050** W/kg.

Information about this device model can be found at

<http://www.fcc.gov/oet/fccid> by searching the equipment authorization system using FCC ID: **YNFWT8000**

Use of device accessories not approved for use with this device may result in different SAR values that exceed allowable limits. Any body worn accessory used with this device must NOT contain any metal. Use of an accessory that does contain metal may cause SAR values that exceed the allowable limit.
